

CS 281 Fall 2025-2026

Project Functional Requirements

- ***Digital Music/Podcast Streaming Service:***
 - Log in as a Member. List all the tracks in the database along with some of their information. Filter the tracks by artist, genre, and whether they are podcasts or songs. First, select a song and press “Play”. Then select a podcast from the same artist and press “Play”. After that, return to the menu and search for albums this time. Select an album and then select a song to play from it. Open the Artist page to view their details, including the description and country information. Based on the total number of listens, display the artist’s country and world ranking. Then go to your user history page to see the last tracks you have listened to. Log out and log in as one of the artists that the standard user listened to. Check how many times the tracks have been played in the last 1 month.
 - Sign up as an Artist by entering all credentials. Try to log in. Without the admin’s approval, the artist cannot log in. Log in as the admin and approve the artist. Log out and log in as the artist. Create two new songs and one podcast by entering their details. Finally, create an album, add these two songs, and finally add a song by another artist. This will turn the album into a collaboration. Now, log in as the collaborating artist and check if their track is included in the album or not. The album will also be displayed in their library. Then log out and log in as a member. Find the new album and display its tracks. Also, find the podcast. Like the podcast, album, and its tracks. Log back in as the first artist and see the total number of likes. Change the name of the created album and display the changes.
 - Log in as a member. List all the tracks, select a song and a podcast, and then add them to one of the member's existing playlists. Then, create a new playlist and add three tracks to it. Go to your profile and see all the playlists you created. Then search for other members. Select one of them and follow it. Log out and log in as the member you have just followed. Open your profile and see all the accounts that you follow, or the ones that follow you. Follow back the user who has just followed you and see their playlists. Give a like to a playlist. Go back to your profile and see all the playlists you liked. Log out and log in as the first member to see the likes in the playlist. Finally, search for playlists and find some playlists that are created by artists. Open one of them and see all the tracks.

- ***Media Sharing Application:***

- Log in as User A and complete the profile by entering a profile description and personal information. Set the account visibility to Private. Create a post by uploading three media as a collage: two photos and one video. Enter a post description. The link and the release date will be generated automatically. Tag User B on one photo and on the video. Then, create a story by describing its content. Again, a unique link will be generated. Log out and log in as User B, who is not following User A. Display all users, find User A, and try to view their posts and the story. The system should not display them. Follow User A and refresh the profile to see the posts turn visible. View the recent post and story. Finally, after 24 hours, verify that the story is no longer visible. Only User A can access the story from their archive, along with their previous stories.
- Log in as a User. Open the homepage and display all the posts of your followed users in descending order by date. Select one post to display details such as total likes, previous comments, tagged users, and share date. Like the post and add a comment. Go back and like another post. Now open your profile page and open the “Interactions” tab. There will be two options: Likes and Comments. Click on “Likes” to display all the posts you like. Select a post to see its details. Now go back and click on “Comments”. Display the commented posts this time. Click on the post to see your comments. Now log out and log in as one of the owners of the liked posts. See the total number of likes increased and the newly written comments. Reply to the comment by adding new comments to the post.
- Log in as an Admin. List all the posts and filter them by the creator username and date. Select a post to see its details. Then delete it as inappropriate. After deletion, verify that the post is no longer visible in the post list and that its attached likes, comments, and tags are no longer displayed anywhere in the system. Log out and log in as a User who follows the owner of the deleted post. Go to your profile and display the total number of followers and the number of users you are following. Click on the “Following” button to display the following users along with some details. Now, find the owner of the deleted post and open their profile to see whether the post is there or not. Log out and log in as the post owner to confirm that the deleted post is also absent from their own profile page.

- ***Theatre Ticket Selling System:***

- Sign up as a customer by email, password, and first and last name. Then, log in and navigate to the customer profile to update your address, phone number, and credit card information. Open up the “Search Plays” page and list all the plays. You can filter by play title, genre, and playwright. By choosing a play, display stagings. For each staging display date, theatre name, and total number of empty seats. Select the staging to display detailed information about the theatre and all available empty seats. Select 2 different empty seats and book them. Please note that without providing any card information, customers cannot book seats. The empty seats must be decreased. Finally, navigate to your profile to view all bookings, including their corresponding theatre, play, and staging information.
- Log in as an admin. Create a new play by entering all its details. Inside the same window, display all artists with their details and select the ones who play in that play. Then display all theatres and select the ones that will stage the created play. (You will create at least two stagings) For the selected theatres, ensure that the newly created stagings do not overlap with existing stagings in the same theatre. Confirm changes. Now, as the admin, display all the plays and their details. Select the newly created play and select one of the stagings and edit them. Log out and log in as a customer. Display all plays and see the newly created play. Display all the artists who play in it. Then, click a button to display all available stagings and view their details.
- Log in as a theatre officer. Display all upcoming stagings in your theatre and filter them by date and time. Select the closest staging and display the play along with the customers and their booked seats. Select a customer to view their details, including their name and contact information. Log out and log in as a customer. Display the plays that you went to and select a play. Among all stagings, display only the ones that the customer went to and select a staging where the customer did not make a comment. Make a comment for the selected staging. Log in as another customer to select a play. The new comment must be visible on the play’s page, with the customer’s name censored, the comment date, and the staging they attended.

- ***House Rental System:***

- Sign up as a new Property Owner by entering all necessary credentials. Add a new property with all its details and finalize the signing-up process. Log in as the Property Owner and open your profile page. Change the GSM number. Go back to the main menu and this time open the “My Properties” panel to display all the properties you have. Click on the “Add” button to create a new property. Display all the properties again and select one of them. In the opened panel, edit some details such as the property name, description, and capacity. Now log out and log in as a Customer. Open the “property search” page that can filter the properties by city, district, capacity, property type, average rating, nightly price range, and desired date range. Find the newly created properties and display their details by clicking on them.
- Log in as a Property Owner. Display all your properties and select one of them. From the calendar, mark a set of dates as “Not Available”. Log out and log in as a customer. Display all properties and select the newly edited one. The property page must display all details of the property, including the property’s average rating, individual ratings, comments, and the writers of those comments, as well as unavailable dates. Now, try to create a new booking by selecting a date range that includes the not available dates and see the system “rejects” it. Change the date range to an available period and finalize the booking. Display details and total price. Go to your profile to view all your bookings, filtered by “passed” or “upcoming”, based on the booking's end date. See the newly created booking. Log in as another customer to see that the dates are now marked as “Not Available”.
- Log in as a Customer. Go to your profile to display all previous bookings. Select a “passed” booking to leave an evaluation. Enter a rating (1-5) and a comment. For “upcoming” bookings, the system does not allow submitting an evaluation. Now log in as the Property Owner, display all your properties, and select the recently evaluated property to see the evaluation details. In the owner’s profile page, the average rating, along with the five recent evaluations, is visible to everyone. To display the owner’s page as a customer, log in as a customer. Display properties and select one. From the property page, press the “View Owner” button to see the previously mentioned details of the owner. While logged in as another customer also display the newly created evaluation.
